PROCESSING INFORMATION

PROCESSING INFORMATION	Injection Molding (preferable standard 2-component injection molding machine to get adhesion to substrate), Extrusion		
PURGING	Purge thoroughly before and after use of this product (e.g. Polypropylene with MFI between 0.5 – 2.5)		
DRYING TIME	Material is not hygroscopic and drying is only necessary if material was stored under moisture.		
COLORING	Material is already pre-colored.		
SHRINKAGE PROPERTIES	Unisoft TPE™ grades are anisotropic materials. Their shrinkage properties are higher in the flow direction, and the shrinkage in the cross-flow direction is less. Unisoft TPE™ ST-30A-BK-1-01 shows shrinkage values between 1.0– 3.2 %.		
RHEOLOGICAL PROPERTIES	Actual rheological data of Unisoft TPE™ materials are shear dependence. Viscosity will decrease at higher shear rates, and should be considered during injection molding design and setup of processing conditions.
